

**REMARKS**

Each of the pending claims includes the following limitations:

*an air entrance, an air exit, and an interior airflow path through said heat sink,  
said air entrance and air exit being proximate a fitting for electrical connection to a light bulb socket,  
said airflow path proceeding from said air entrance toward the top of the bulb, turning 90 degrees to move laterally a predetermined distance, then turning to move down toward the bottom of the bulb, and out said air exit, said airflow path permitting air to enter said heat sink through said air entrance, absorb heat from said heat sink, and exit said heat sink through said air exit, and  
air located within said enclosure.*

These limitations, either singly or in combination with the other claim elements, are not found by Applicant in the prior art. Applicant believes that these limitations, either alone or in combination with the other claim elements, establish patentability of the invention. Applicant request that the Office give serious consideration to the recited structure.

If any fees are due those fees should be charged to Deposit Account No. 50-0581.

Respectfully submitted this 23<sup>rd</sup> day of March, 2006.

A handwritten signature in black ink, consisting of a large, stylized capital 'D' followed by a horizontal line that tapers off to the right.
